## HNS-8605P

### Managed 4 x 10/100/1000 PoE+ & 1 x 10/100/1000 RJ45 Switch

#### **Description**

The HNS-8605P is a Lite Managed Hardened PoE+ Ethernet Switch perfectly suited in harsh environments and an ideal solution to deploy in surveillance systems. The switch is designed to meet the requirements of both power and data transmission over single Ethernet cable to PoE appliances and devices without the need for power outlets, eliminating additional cost of electrical cabling and circuits.

The switch's rugged case and hardened components withstand high degree of vibration, shock and wide operating temperatures from -10°C to 60°C. Switch features 5 10/100/1000Base-T ports to satisfy new and evolving network demands. With 4 IEEE 802.3at compliant ports, each of them allows to supply up to 30W in controllable ways to satisfy the growing demand of high power consuming network devices such as WLAN AP, VoIP phones and IP surveillance cameras, and other powered devices in distances up to 100 meters with Cat.5e cables or above.

In addition, the switch also facilitates built-in basic software features such as QoS, VLAN tagging, and other network function & management to deliver a rock solid, adjustable network to down port networks, to ensure impressive uptime even in the most challenging network conditions.

#### **Features Highlight**

#### Robust Switch Performance

With a hardened metal case, surge and ESD protection, the HNS-8605P provides a high level of immunity against electromagnetic interference and heavy electrical surges, thus facilitating easy deployment in demanding environments. In addition, the HNS-8605P offers high performance switch architecture with five 10/100/1000Base-T ports to meet the requirements of high-bandwidth access in wide operating temperatures.

#### High-Power Budget for PoE Network Devices

High-Power Budget for PoE Network DevicesTo fulfill the growing demand of high-bandwidth, high-power PoE for network applications and eliminating the cost of electrical cabling and circuits, the HNS-8605P is designed under IEEE 802.3at standard PoE. With 120W PoE power budget capability for whole system, the switch allows simple "plug and play" PoE for various types of high power consuming PoE devices. This makes the HNS-8605P a very convenient solution for applications far away from power outlets satisfying PoE extension applications in much longer distances.

### Intelligent PoE+ for powered devices

The HNS-8605P is designed with intelligent PoE+ features to utilize power more efficiently. To monitor real-time status of PDs, the switch sends alive-checking packets to PDs. If a PD fails to respond, the switch's PD live check feature detects the failure and reactivates the PD. This reduces management burden and increases system reliability. Using power scheduling mechanism of the switch, administrators can set power on each port to a desired hourly/weekly schedule and can enable or disable the power output to these devices accordingly. Thus consumption of excess power can be limited and energy can be saved.

#### **PoE Scheduling**

#### **PoE Alive-Checking**

## **VOLKTEK**

#### **Features Highlight**

#### DIN Rail to Power Adapter (AC to DC) & Terminal Block

The HNS-8605P is ideal solution to prevent the failure of single power circuit, in which provides you options to facilitate the 802.3at High Power PoE usage. Either "DIN-Rail Power Adapter" to convert AC to DC for board operation in an easily and firmly installation with hardened connection to the switch unit OR "Terminal Block" which supports primary (PWR) 48VDC and standby (RPS) 48VDC can be used to powering PoE network. Categorized by its compact design, DIN-Rail Power Adapter can easily fit in smaller infrastructures and is extremely simple in installation. Saving your time and space, this adapter can be easily mounted next to switch unit in surveillance applications that have little space available. The second optional power supply through "Terminal Block" provides a low-cost, simple solution to the problem of an inadvertent failure of the internal power-supply, which can result in the shutdown of switching device, the PoE devices attached to its ports, or an entire network.

#### Simplified Installation w/ Compact Size

The HNS-8605P provides varied choice of deployment locations even in small space, harsh environments, quick and easy installation way by its compact size. Every HNS-8605P is equipped with auto MDI/MDI-X on all ports for simple connection to other switches and hubs. When a compliant device is attached, the power supplied will automatically detect and classify to fit the device. With diagnostic LEDs panel, the HNS-8605P allows you to know switch status and simplify troubleshooting.

#### Efficient network monitoring and proactive capability

In a network, the issues that impact network performance can be quickly resolved with the HNS-8605P's most accepted and enhanced traffic management, monitoring and analysis protocols. SNMP allows end users to centrally manage different levels in a network, QoS, IGMP gives the capability to monitor the network performance. HNS-8605P can help to ensure a reliable network by identifying connectivity and performance issues and isolating the problem remotely on individual switches. This avoids high OPEX and provides administrators the control they need to manage a healthy and efficient network.

#### **Applications**

The HNS-8605P combines high-power PoE+, robust performance for surveillance systems in harsh environments. With its compact size, highly reliable and secure features ensure continuous operations in some special requirements for transportation, factory and outdoor places where high vibration degree, shock and wide range temperatures are present.
