VOLKTEK

9065 Series 9065-8T2GS-I / 9065-8T-I

Managed 8 x 10/100 RJ45 & 2 x FX/GbE SFP Industrial Switch / Managed 8 x 10/100 RJ45 Industrial Switch

Description

Are you prepared for a networking solution that transcends the ordinary? Look no further than our 9065 Series, meticulously crafted to excel in the most demanding of industrial environments. Whether you operate in the realms of smart cities, surveillance, or transportation, this is the switch you've long awaited.

The 9065 Series arrives in two formidable variations – firstly, the 9065-8T-I, a Managed 8 x 10/100 RJ45 Industrial Switch, and secondly, the 9065-8T2GS-I, a Managed 8 x 10/100 RJ45 & $2 \times FX/GbE$ SFP Industrial Switch.

These switches are meticulously engineered for excellence, delivering top-tier performance that surpasses all expectations. Encased in a rugged, hardened shell and fortified with components capable of enduring extreme levels of vibration and shock, these switches are designed to ensure uninterrupted operation even under the harshest conditions.

Crafted to thrive in extreme climates, they function flawlessly across a wide temperature range, from a bone-chilling -40°C to a scorching 75°C. Regardless of the environment, the 9065 Series ensures the seamless operation of your network.

Each port in the 9065 Series boasts two LEDs, providing instant feedback on link status, transmission speed, and link/activity status. Moreover, featuring a relay output for event alarms, you'll perpetually remain well-informed. In the event of a power failure, a built-in LED alarm activates, ensuring administrators are promptly notified.

Yet, that's not the entirety of it. The 9065 Series transcends being merely a switch; it is a tailored solution meticulously designed specifically for the smart city, surveillance, and transportation markets. Whether you're elevating urban infrastructure, reinforcing security, or optimizing transportation networks, our switches are the key to unlocking your success.

Features Highlight

SNMP Remote Management

SNMP is used for collecting information from, and configuring, network devices on an Internet Protocol (IP) network. Volktek Managed switch provides an SNMP agent that works with third-party SNMP management software to monitor the device status.

Recovery Timer for Loop Detection

Instead of being re-opened manually, a configurable timer is provided to automatically recover a port blocked by the loop detection function.

RMON

Remote Network Monitoring is a network analysis protocol, designed to aid the network administrator in gathering data on network operations such as traffic data both historical and real-time, and configurable data based on variables for time, highest or lowest traffic, users, and more.

VOLKTEK

Features Highlight

ACL

The L2/L3/L4 Access Control List (ACL) function allows you to create filter rules for determining whether the switch will forward specific packets (based on information contained in the headers) for security or control reasons. These criteria cover multiple protocol layers (including MAC and IP) and port numbers. It enables network operators to flexibly control the traffic (like blocking traffic from P2P software or throwing away packets destined for unused port numbers, which might be hacker attacks).

Dual Fiber Ports

It's useful connectivity to save the cost for fiber cable deployment. With this dual fiber link support, users can acquire the benefits of link redundancy with ring-aware switches, like Volktek management switches.

Applications

Specifications

Standards		
IEEE 802.3	10BASE-T	
IEEE 802.3u	100BASE-TX
